KAPITEL 1

Ghost in the Machine

765 Wörter

I was in the middle of recalibrating the quantum sensors—again—when

ARIA’s voice cut through the hum of the engineering deck. Somewhere behind

the console a relay clicked, once, and the hum of the deck went quiet — the sound of

a system deciding, on its own, to answer.

Tab

“Maya. Incoming transmission on the emergency frequency.”

I didn’t look up from the console. “Probably another false positive from the

coronal mass ejection detector. That thing’s been jumpy since the flare last

week.”

“Negative. This is… different.”

ARIA’s tone made me pause. She didn’t sound like an AI. She sounded like

she’d seen a ghost, which was ridiculous because ARIA couldn’t see ghosts and

neither could I. We were engineers. We dealt in facts, in things we could

measure and fix.

“What kind of different?”

“Instantaneous. No light-speed delay. No signal degradation. And…” ARIA

paused, which she never did. “The carrier frequency is using a code that

TREFFER · 2

Timeline — before the signal Dokument

Three years before the signal, Maya’s sister died at Research Facility 7 ; the corporation called it an

accident. Six months before the signal, the device was moved off the site and studied in secret. The signal

arrives on Day 1.

Horizon Station — cast and places Dokument

Dr. Maya Chen is the station’s chief engineer, twelve light-years from Earth. ARIA is the station’s

intelligence: Maya treats her as a colleague, not a tool. Director Kavic arrives from the corporation with

an answer he does not give. Research Facility 7 is the Nevada site where the first device was built.
